

Dermalux LED Phototherapy

Get ready to glow. Do you suffer from acne/spot prone skin, Rosacea, redness, psoriasis and dermatitis? Dermalux LED Phototherapy is a non-invasive treatment that uses clinically proven therapeutic light energy to trigger the skin's natural rejuvenation and repair processes without discomfort or downtime.

DERALUX OFFERS 3 TYPES OF PHOTOTHERAPY:

Dermalux Blue

Blemish fighting blue light destroys the bacteria which causes spots and improves skin clarity without irritation. It also has a calming effect for problem skin conditions.

Dermalux Red

Rejuvenating Red light energises cells to accelerate renewal, boost collagen and elastin production and increase hydration for smoother firmer skin. Ideal for restoring vitality and glow.

Dermalux Near Infrared 830nm

Regenerating Near Infrared light offers advanced rejuvenation benefits, promotes healthy skin, calms redness and irritation and helps to reduce pigmentation.

Dermalux Tri-Wave Therapy

For enhanced and accelerated results, Dermalux therapy uniquely delivers multi-wavelength treatments which are tailored to your skin condition.

Dermalux can be used as a standalone treatment or an addition to most aesthetic treatments offered in clinic.

DERALUX OFFERS 3 TYPES OF PHOTOTHERAPY:

Beautiful Skin Powered By Light

LED Phototherapy for visibly radiant, rejuvenated and refined skin.

Dermalux LED Phototherapy is a non-invasive treatment that uses clinically proven therapeutic light energy to trigger the skin's natural rejuvenation and repair processes without pain or downtime.

From the first treatment, Dermalux instantly boosts the complexion to restore vitality and glow. A treatment course offers cumulative benefits and can be targeted to specific skin concerns for the face and body with lasting and visible improvement.

We believe everyone deserves beautiful skin. Discover the benefits of Dermalux as part of your essential skin health regime.

How Does it Work?

Our skin has the ability to absorb light energy and use it to stimulate or regulate essential cell processes. LED Phototherapy is the application of beneficial wavelengths from the visible and infrared part of the light spectrum which have proven skin enhancing benefits. Skin cells that are energized function better and can renew up to 200% faster accelerating regeneration and repair.

What are the benefits?

Dermalux uses unique combinations of clinically proven blue, red and near infrared wavelengths to boost collagen production, increase hydration, calm redness and irritation and blitz blemish causing bacteria. As the light triggers a whole cascade of skin enhancing processes, the benefits continue even after the treatment has finished.

What does the treatment involve?

Dermalux is a relaxing, pain free experience with proven mood enhancing effects. Enjoy some luxury me-time as your skin absorbs the energising light to kick start cell regeneration, calm irritation or restore radiance. Each treatment lasts up to 30 minutes and with no downtime, you simply get up and glow!
